What Is Data Communications?

- ▶ When we communicate we are sharing information
 - ► Local sharing, e.g. face-to-face
 - ▶ Remote sharing, e.g. over some distance
- Data: information being shared, e.g. text, numbers, images, audio, video
- ▶ Data Communications: exchange of data between two (or more) devices via some transmission medium

Evamples

Effective Data Communications

Delivery: the data must be delivered to the correct

destination

Accuracy: the data received must be accurate

representation of the data sent

Timeliness: the data should be delivered within a

reasonable time

Data Communications

Networks

The Internet

Examples

Simplified Communications Model

Source: Device that generates data to be transmitted

Transmitter: Converts data from source into transmittable

signals

Transmission system: Carries data from source to destination

Receiver: Converts received signal into data

Destination: Takes and uses incoming data

Communications Tasks

Simplified communications model makes it look easy ... but there are many tasks to be performed in a data communications system

Transmission system utilization	Addressing
Interfacing	Routing
Signal generation	Recovery
Synchronization	Message formatting
Exchange management	Security
Error detection and correction	Network management
Flow control

Categorizing Communication Technologies

Data Communications: transmitting signals in reliable and efficient manner; focusses on individual links

Networks: communications across set of links; Wide Area Networks, Local Are Networks, The Internet

Examples

Transmission Line

- Transmission line (or system) is key part of communications system
- "Link" between transmitter and receiver
- Needs to provide required capacity, with acceptable reliability at minimum cost

Example

The Transmission of Information

Transmission and Transmission Media

- ► How to convert information into transmittable electromagnetic signal?
- ▶ What transmission media to use?

Communication Techniques

- How to encode information into a signal?
- ► How to deal with errors?

Transmission Efficiency

▶ How to efficiently utilize/share communications system?

Data Comn

Networks

The Internet

Examples

Networks

- Demand for any user to communicate with any other machine/user
- ► Require:
 - Communication software (see The Internet)
 - ► Communication network technologies: WANs and LANs

Data Comms & Networks

Motivation

Mode

Data Com

Networks

The Interne

- .

Wide Area Networks

- Span a large geographical area
- Require crossing of public right-of-ways
- Rely on links of common carriers (telecommunication companies)
- Carries data of multiple organisations
- ► How to find path across a network?
- ► How to deliver data across the network?
- ► Example technologies: ATM, Frame Relay, SDH

Data Comms & Networks

Motivation

Mod

Data Comm

Networks

The Intern

Local Area Networks

- ► Small coverage area, e.g. building, campus
- Owned and operated by organisation owning end-devices
- ▶ Higher internal (per user) data rates compared to WANs
- ► How to arrange nodes in a LAN?
- ► How to share LAN amongst multiple users?
- Example technologies: Ethernet, Wireless LAN

Networks

The Internet

Example

The Internet

Origins

- Evolved from US Department of Defence research network, ARPANET (developed in 1969)
- Used packet switching technology (whereas telephone networks used circuit switching)
- Development and standardization of the Internet suite of protocols: TCP/IP

What is The Internet?

- Collection of networks connected together using common software: Internet Protocol (IP)
- ► Although network technologies differ, any computer can communicate with any other computer (providing they are using IP)
