Ī	Application	Application specific functionality
Application Support	Presentation	Converts data between different formats, encryption and decryption
	Session	Maintains session between applications
	Transport	Reliable data transfer between end devices
Network	Network	Allow computers to communicate across different networks Provide routes, optionally performance enhancements
Link	Data Link	Transmit data across link in efficient, reliable way Addressing of devices on links
	Physical	Physical interface between transmission device and medium How to send bits over medium
